**FAUNISTIC RECORDS FROM THE CZECH REPUBLIC – 469**

---

**Hymenoptera: Apoidea: Halictidae**

*Seladonia seladonia* (Fabricius, 1794). Moravia centr., Olomouc – Holicе (6469), 49°34'N, 17°17'E, 7.viii.2016, 1 ♀, A. Vládek & A. Přidal lgt., A. Přidal det. et coll.; Moravia mer., Brno – Červený kopec (6865), 49°10'51"N, 16°35'12"E, 27.v.2017, garden, 1 ♀, L. Říha lgt., M. Říha det. et coll.

Species distribution: China: Xinjiang, Inner Mongolia; Kyrgyzstan; Tajikistan; Uzbekistan; Afghanistan; Turkmenistan; Iran; Caucasus; Turkey; Israel; European Russia (south part, Altai); Hungary; Romania; Greece; former Yugoslavia; Austria; Slovakia; Switzerland; Italy; France; Spain; Portugal; N. Africa (Tunisia) (Niu et al. 2004, Astafurova et al. 2017). In Poland, the species is expected to occur in the south-eastern territory (Pesenko et al. 2000). In the Czech Republic, historical records are reported (Smetana et al. 2010) from Moravia (Kocourek 1989, Přidal 2004, Straka et al. 2007), and in South Moravia it is considered to be regionally extinct (Straka & Bogusch 2017). It was not even recorded during an entomological survey by Pádr (1995) of Pálava – among the warmest parts of Moravia – probably due to low species density, or missing out of sandy habitats (Ember 2003, Pachinger 2003, Zettel et al. 2004). It was collected only once in Olomouc in spite of observations over two whole seasons. The nearest reliable records come from western Slovakia (Lukáš & Okáli 1998, Smetana et al. 2010) and eastern Austria (Ember 2003, Pachinger 2000, Zettel et al. 2004). In the context of the current known distribution of the species, the record from Olomouc is one of the northernmost. Confirmed recent occurrence of the species in the Moravian part of the Czech Republic.

ACKNOWLEDGEMENTS. We thank Mr. and Mrs. Dušek (Olomouc, Czech Republic) for permission to observe the bees at experimental fields of Crop Research Institute in Olomouc.
